

Edop Field-Wide Piping Replacement

Mobil Producing Nigeria (MPN)

Ariosh was awarded the detailed engineering contracts for Revamp of Edop complex covering a production platform, one gas injection platform and three wellhead platforms. Target is to zero field weld during installation.

The Edop field is located in OML 67 of the south eastern Niger Delta approximately 40 kilometers south of the Qua Iboe Terminal (QIT). Edop consists of five wellhead platforms, a production platform and one gas injection platform. The revamp is aimed at repair/replacement of defective systems to extend the life of the facilities and support recovery of the remaining resource potential of the field.

The Scope of Work included Detailed Engineering Design (DED) covering:

- Revamp of Instrument gas skid
- Replacement of corroded piping and pipe support
- Process Optimization
- FIV study and mitigation

Services

Detailed Engineering Design (DED)

Scope

Facilities Optimization & Life extension

Location

Nigeria, West Africa

Safety Record

Zero LTI, Zero MTI

Status

Completed Q2 2017
