

First E&P OML 83 & 85 Development Project

Client

First Exploration and Petroleum Development Company Limited

Services

Engineering, Procurement, Construction and Commissioning (EPCC)

Facilities

- Anyala Field, OML 83
- Madu Field, OML 85

Safety Record

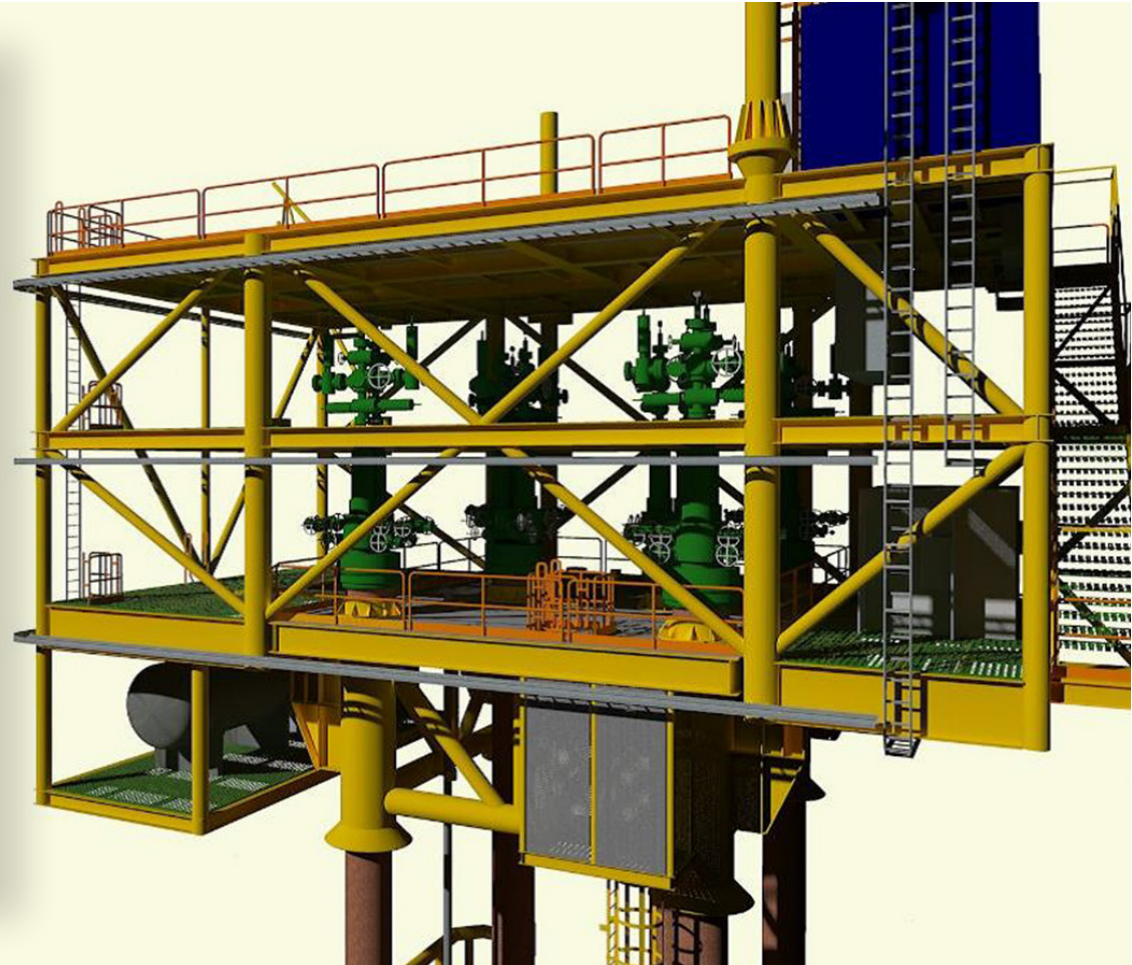

- Zero LTI

Man-hours

10,000

Status

Completed

Introduction

This greenfield development project, is being executed to extract the recoverable hydrocarbon reserves from OML 83 (Anyala Field) and OML 85 (Madu Field), located approximately 45 km offshore in the Niger Delta. OML 83 covers an aerial extent of 125 sq. km, with the Anyala field as the only discovery within the acreage. The Madu field which is for now the only discovery within OML 85 has an aerial extent of 521 sq. km and water depth of approximately 20 - 55m

Project Scope

Engineering, Procurement, Construction and Commissioning (EPCC) of Conductor Supported Platforms (CSP) and Transportation & Installation of Topside Module

- Provision of detailed multi-discipline engineering, to IFC status, for (2) Conductor Supported Platform (CSP); Procurement and delivery of all materials and equipment
- Construction and fit-out of each CSP including all onshore precommissioning and loadout FAS at the construction facility quayside
- Offshore hook-up and commissioning of each CSP
- Transportation and Installation of: (2) topside module of approximately 400 MT each, Conductor Joints, Lower subsea structure, Upper subsea structure, Drilling Module, Stabilisation Frame and Pile Joints

Project Status: The project was successfully completed in Q1, 2018 within time schedule and in estimated budget frame
